V-Trak Lite

V-TRAK

Simple mounting and positioning hardware

V-TRAK Lite is a new range of simplified, convenient, lightweight seating hardware providing all the unique, multi-axis movement of V-Trak Original but in a simplified form to suit less demanding positioning requirements.

LIGHT- For many users, weight is an important priority and any reduction in weight is especially welcome. V-Trak Lite was designed to address this issue.

SMART- The design is compact and elegant and available for wheelchair widths from 9" to 19". Bariatric versions are under development. The lower visual impact is even more apparent when multiple segments are used in paediatric cases, the slimmer and uncluttered profile makes the installation more acceptable.

SIMPLICITY – As a result of extensive research and analysis, the system can be fitted easily to any wheelchair in common use using a system of mounting brackets attached to the wheelchair canes. These brackets are simple to fit, easy to position yet secure in use. The brackets also form an integral part of the positioning capabilities. V-Trak Lite can be installed and adjusted with a single 5mm Key wrench.

FLEXIBLE - Once installed, the V-Trak Lite hardware gives complete control of the positioning of the backrest, and any attached accessories, in relation to the seat.

COMPATIBLE - V-Trak Lite uses the same mounting blocks as V-Trak Original but is designed principally for use on round section canes. In this way, it retains the same adjustment in all planes and the range of seat depth (forward/rearward) movement is 80mm

VERSATILE- V-Trak Lite can be used with all V-Trak backrests (Axis/Comfort) and with any custom backrests with or without the standard rear fixing track. V-Trak Lite hardware is widely used by manufacturers of special seating to simplify and rationalise the attachment and orientation of moulded solutions for example; **Foam-in-Place, Foam Carving and micro-modular systems such as Matrix and Lynx.**

SAFETY – All this versatility and adjustability has been tested to protect the user. V-Trak Lite hardware has been crash tested as part of a backrest system and passed ISO 16840 (please see www.v-trak.com for more details).
